Mobile App and Municipal Online Payments

The processing fees for the mobile app and the municipal online payments website have been removed.

Residents are invited to create an account to pay your water utility bill. Registrants will need an account number (include the dashes).

Should you notice any issues, please contact the water department at 817-626-5421 so that the City may pass the information to Tyler Technologies to get any problems fixed.

Access the [River Oaks Online Payments website](#) to get started. Look up the mobile app under MYCIVIC UTILITIES.

From the City River Oaks

Recalculating Sewer Charges During Lower Water Demand Months

Each year the City of River Oaks averages the water consumption of the December, January, and February billing periods to recalculate sewer charges.

These months are used because typically residents do not have a high outdoor water demand and are considered to be the lowest overall water use.

From the City River Oaks

River Oaks Food Bank Tips

The River Oaks Food Bank donation days are held on the second and fourth Fridays of each month at the River Oaks Event Center, located at 5300 Blackstone Drive in River Oaks.

Attendees are encouraged to begin lining up by 9 a.m. to get a place in line.

The supply truck often arrives early, meaning the food is given to line members earlier than the posted time.

Attendees are requested to stay in their vehicle, as the food bank is drive through.

For more information, call 817-732-5885.

Winter Safety Tips for Pets

Exposure to winter weather can be dangerous to all pets. Winter walks can become life threatening if chemicals from ice-melting agents are licked off bare paws.

All pet owners should monitor weather forecasts and keep their pets inside a warm, dry, safe place when the temperature gets below 40 degrees. Longer-haired and thick-coated dog breeds are more tolerant of cold weather, but no pet should be left outside for long periods in temperatures that get close to freezing.

Follow these safety tips to prevent cold weather dangers from affecting your pet's health:

- Provide your pet with shelter from the wind and precipitation. The floor of the shelter should be off the ground to minimize heat loss. Do not use blankets or towels for bedding; they can get wet easily and attract insects. Straw or hay make good insulators.
- Make sure pets have unlimited access to fresh, non-frozen water.
- Coolant and antifreeze are lethal poisons for pets. Be sure to thoroughly clean up any spills from your vehicle.
- Make sure to have enough food, water, and any prescription medicine on hand for at least five days.

From the Benbrook Public Library

Yoga at the Library Dec. 11

Yoga classes at the Benbrook Public Library located at 1065 Mercedes St. in Benbrook, are taught by a professional and are for yogis of all skill levels. The 45-minute classes are free and are a great way to improve oneself both physically and mentally.

Those who have their own yoga mats are encouraged to bring them, but the library does have some mats available for those who may need them.

Yoga classes are held the second and fourth Monday of each month at 6 p.m. There are occasional exceptions, and they will be noted on the [library calendar](#).

From the Friends of the River Oaks Animal Shelter

River Oaks Animal Shelter in Need of Supplies

The animal shelter is in need of blankets, sheets, bleach, Odo-ban, and Dawn dish soap.

Donations can be dropped off at the River Oaks Police Dispatch located at 4900 River Oaks Blvd., River Oaks, TX, 76114.

From U.S. Army Corps of Engineers

U.S.A.C.E. Fort Worth District to Host Conference at Benbrook Lake

The United States Army Corps of Engineers' Fort Worth District will host a press conference at Benbrook Lake, on Saturday, Dec. 9, to release details of the planned suspension of planned through traffic closure between North and South Holiday Parks.

The press conference will begin at 10 a.m., at North Holiday Park, 400 Lakeview Dr, Benbrook, TX 76126.

The Fort Worth District Operations and Lake staff will also be on hand to discuss the status of the long-term project to widen the road through the parks with protected lanes for cyclists and pedestrians.

Among the Corps' partners participating in the press conference include former Fort Worth Mayor Betsy Price, representatives from Streams and Valleys, and leadership from local bike and community groups.

Visit the Fort Worth District Web site at: www.swf.usace.army.mil and SWF Facebook at: <https://www.facebook.com/usacefortworth/>

From the Benbrook Public Library

Holly Jolly Holiday Dec. 9

The Benbrook Public Library will host its 9th Annual Holly Jolly Holiday celebration Saturday, Dec. 9, from 11 a.m. to 3 p.m.

This holiday celebration is free for the entire family. It features a harpist, a reindeer photo opportunity, the Uptown Carolers performing holiday songs, balloon making, a special appearance by Mrs. Claus, and a holiday elf show.

Arts and crafts, laser engraved ornaments, hot chocolate, and other refreshments will be available throughout the day.

All ages are invited to attend and celebrate the holiday season.

Texas History Minute by Dr. Ken Bridges

American Radiochemist, James Andrew Harris

In science, the passion for discovery drives great minds to answer the great questions about the world. The competitive atmosphere demands that scientists look at problems from multiple viewpoints and devise increasingly creative ways of uncovering knowledge. This process of research and experimentation has created the scientific and technological marvels of the modern world. Though Texas has been home to many great minds, one stands out in the field of chemistry, **James Harris** (left). Harris was a key member of a research team that discovered two new elements, making him one of only two Texans to help discover an element.

James Andrew Harris was born in Waco in 1932. His parents divorced when he was young, leaving his mother to raise the future scientist alone. They eventually moved to Oakland, California, where he attended high school in the late 1940s.

After graduation in 1949, Harris returned to Texas. He enrolled at Huston-Tillotson College in Austin. He excelled at his studies and graduated with a bachelors degree in chemistry in 1953. He enlisted in the army after graduation. Harris served for two years, rising to the rank of sergeant before his honorable discharge in 1955.

Harris found it difficult to find work after the army in spite of his credentials. Eventually, he landed a job at Tracerlab, a Cali-

fornia company that specialized in making radiation-detecting equipment. Along the way, Harris married and raised five children. In 1960, he accepted a position as a nuclear chemist at the Lawrence Radiation Laboratory at the University of California at Berkeley.

In 1969, Harris was part of a team at the Lawrence Radiation Lab that included noted scientist Dr. Albert Ghiorso, when they discovered an entirely new element, one never found in nature. This element, Element 104, was eventually named Rutherfordium in 1997, after New Zealand native and physicist Ernest Rutherford. Rutherford won the Nobel Prize for Chemistry in 1908 for his work in discovering the radioactive half-lives of elements and differentiating between types of radiation from the decay of particles and whose work is considered by scientists to be the beginning of nuclear physics.

Rutherfordium is an extremely rare metal with chemical properties similar to titanium or zirconium. The element was difficult to isolate. The atom itself is large and unstable. Its most stable form is Rutherfordium-267, consisting of 104 protons and 163 neutrons. Because it is so unstable, it is radioactive and has a radioactive half-life of around 10 minutes. That is, in 1.3 hours, half of the atoms in a sample will spray off so many subatomic particles that it will transform itself into a different element entirely. Other known isotopes of Rutherfordium have half-lives ranging from less than a second to 15 minutes. These short half-lives make it very difficult to study.

In 1970, Harris, Ghiorso, and their team made another breakthrough with the production of yet another new element. Element 105, consisting of 105 protons (as opposed to just eight protons for oxygen or two protons for helium) was itself very unstable, and the atoms decayed quickly into other elements. Little is known about its nature except that it is a metal. The two elements were the largest atoms discovered up to that time.

The American researchers initially

wanted to list Element 105 as Hahnium after German scientist Otto Hahn, who won the Nobel Prize in Chemistry in 1944 for his discovery of nuclear fission.

A team of Russian scientists at the Joint Institute for Nuclear Research in Dubna, Russia, claimed that they had discovered both of the elements first in the 1960s. However, other scientists pointed out that the Russian team had admitted altering their data. Years of debates followed the competing claims. The American team was ultimately able to name Rutherfordium while Russian scientists were allowed to give the name Dubnium to Element 105, after Dubna, the city that housed the research lab.

At this point, the elements are so rare that no practical use for them has been devised beyond laboratory experiments.

Harris was praised by colleagues for his co-discovery and toured the country giving periodic lectures on his work. Huston-Tillotson College awarded Harris an honorary doctorate for his work in 1973.

Harris retired in 1988. Today, 118 elements are known to exist, either in nature or in the lab. Along with Dr. Gregory Chopin, co-discoverer of the radioactive element Mendelevium, Harris is one of only two Texans be credited with co-discovery of an element. And he is to this day the only African-American to be responsible for the discovery of any new element due to his work with the Berkeley research team.

Harris died at his home in California in 2000 at the age of 68.

Tips to Lower Your Energy Costs This Winter

The U.S. Department of Energy reports that low-income households face an energy burden – the portion of income spent on home energy costs – three times higher than other households, leading to tough budgeting decisions for many Americans.

Energy efficiency is an important way to tackle home energy costs and can also support sustainability. Knowing that these issues are important to their customers and communities, Wells Fargo contributed more than \$19 million last year to nonprofits that aim to advance sustainability, including a \$500,000 grant to the Beneficial Electrification League.

Whether your motivations are economic, sustainability-related or both, Keith Dennis, president of the Beneficial Electrification League, offers these smart tips to help you curb your energy consumption this winter:

1. Give energy-efficient holiday gifts. Leverage holiday spending on items that can help you save down the line by giving energy-efficient gifts to members of your household this holiday season. Look for gas alternative products like electric lawn tools, bikes and scooters, smart devices and appliances.

Energy-efficient electric products offer good results, are often more cost efficient and support sustainability. Certain retrofits, up-

dates and upgrades may even qualify your household for additional savings via a rebate, thanks to the Inflation Reduction Act of 2022.

2. Request an energy audit of your home. With a home energy audit, you can obtain your Energy Star rating, important information regarding your energy usage, and identify sources of energy loss, which you can then take actions to correct. Resources for obtaining a professional energy audit or conducting one yourself can be found at energy.gov.

3. Beat the peak. Ask your utility provider about discounted rates. Some offer cheaper rates during parts of the day when general usage is down — think early in the day or late at night. Strategically tackle your energy bills by doing laundry and other energy-intensive chores at off-peak times.

4. Take advantage of tax credits. Making energy improvements to your home? The Inflation Reduction Act of 2022 expanded the tax credit amounts and types of qualifying expenses available. Look for tax credits on items like new energy-efficient exterior doors, windows, central air conditioners, water heaters, furnaces, boilers and heat pumps.

5. Utilize electric technology. Consider installing a smart thermostat, smart switches, or smart home devices for energy-intensive household items like, lights and heating systems. Smart technology is designed to automatically adjust to your needs, helping you save energy and money.

During a long cold winter, energy-efficient technologies and updates can help you weather the season, for a cozier home and a lower-carbon future.
